Why Buy Honeycomb Specialty Shades From Smith+Noble?

2 styles designed for hard-to-cover windows

Made of Honeycomb fabrics

Custom made to fit your specific window

Extensive selection of fabrics and colors

Fast delivery

ORDERING CHECKLIST – FOLLOW STEPS A-D

A CHOOSE Product Style

Skylight Shades These shades offer the best light control option for skylight windows. The energy-efficient, foam-insulated hardware frame fully surrounds and holds the fabric at any angle, allowing the shade to be opened to any position. Skylight poles (see price chart) are available for out-of-reach windows. Shade snaps into side mount brackets for easy installation. Please indicate “flat ceiling” or approximate angle at which the shade will be mounted under Notes on the order form. Hardware is available in white only. Please note: Skylight shades are available as inside mount only.

Arches These shades feature fanned out Honeycomb fabrics and cannot be opened. Arches and quarter circles are installed with brackets mounted on the flat sides. All shades are held in place by small, clear clips mounted along the perimeter. A full size template* is required on any arch that is not a perfect arch (width equals exactly twice the height). Please note: Arches over 60" wide must be perfect arches. Arch height must be at least 30% of the width, but no more than 50% of width.

B CHOOSE Material, Color Name & Number

All of our Honeycomb shade fabrics are available in both Arch shades and Skylight shades. We suggest you consider light control, privacy and design needs when selecting your fabric. Refer to your Smith+Noble catalog or our website, smithnoble.com to make your specific color choice.

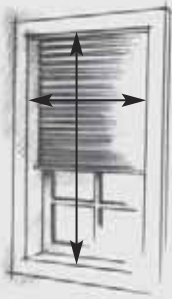

C CHOOSE Upgrades

A Skylight Pole is available for Honeycomb Skylight Shades. You can add this option under the “Upgrades” column on your order form.

D CHOOSE No Charge Options

• Skylight Shades: Specify “Flat Ceiling” or the approximate angle at which the shade will be mounted under *notes* on the order form.

MEASURE – INSIDE MOUNT

Inside mounted blinds or shades are contained within your window frame. Many people prefer an inside mount because it provides a finished, built-in look without covering the window molding.

For an inside mount, your window's frame depth needs to be the same or greater than the minimum depth required on the chart below.

FRAME DEPTH

If your window frame depth is less than the minimum depth listed below, you will not be able to mount a shade.

For the face of your product to be flush with the wall, make sure that your window depth is the same or greater than the flush mount depth on the chart below.

Provide the exact width and height measurements of your window opening. (A small deduction will be taken from the measurements you specify to allow for operating clearance.)

PRODUCT STYLE	WIDTH (MEASURE LEFT TO RIGHT)		HEIGHT (MEASURE TOP TO BOTTOM)	
	WHERE TO MEASURE	MEASUREMENT TO USE	WHERE TO MEASURE	MEASUREMENT TO USE
Skylight	TOP, CENTER & BOTTOM	NARROWEST	LEFT, CENTER & RIGHT	SHORTEST
Arch*	BOTTOM	BOTTOM	CENTER	CENTER

Use this table to determine which width and height measurement to use for your product. *Note: A full size template must be submitted with your order for any Arch that is not a Perfect Arch (width equals exactly twice the height). Arches over 60" wide must be perfect arches. See Arch price list for other limitations. For specific information regarding templates and ordering a template kit see *How to Make a Template* on the following page.

* Add 15% for Twin Cell, 45% for Petit/Grand Blockout & Triad Cell

** Used to operate out-of-reach Skylight shades. The pole adjusts up to its maximum length. Specify "Skylight Pole" under Upgrades on your order form.

HOW TO MAKE A TEMPLATE

A template is essentially a full size drawing or pattern of your window opening.

Templates are required for odd shaped windows to ensure that the window treatment will be manufactured to fit properly.

YOU WILL NEED:

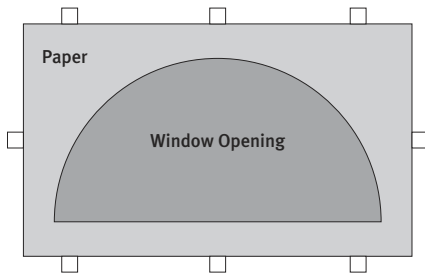

- Brown craft paper
- Black marker
- 48" mailing tube
- Non abrasive stickers
- Metal measuring tape
- Scissors

Step 1

Measure the size of the window from left to right and from top to bottom (center) of window opening. Note these measurements for use later in completing the template process. Take all measurements to the nearest 1/8". We will take a small deduction from the actual size of the window opening to allow for sufficient clearance when mounting the window treatment. **DO NOT** take any deductions from your actual measurements; we will do that for you!

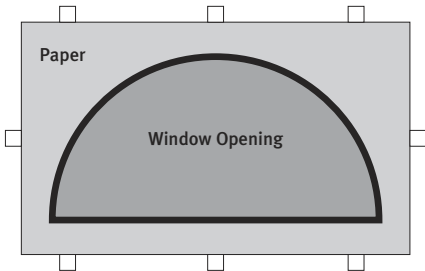

Step 2

Make sure that the paper lays flat against the window opening. Cut the paper so that it is approximately 10" larger than your window opening on all sides. Place the paper over the window opening using the non-abrasive stickers to adhere it. Make sure that the paper is lying flat. Readjust the stickers if necessary.

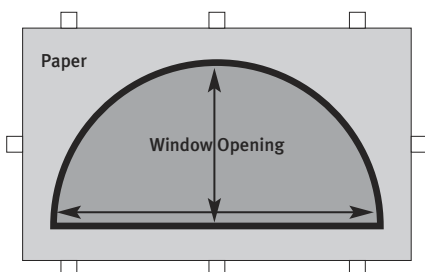

Step 3

Trace the window opening on the paper using the black marker.

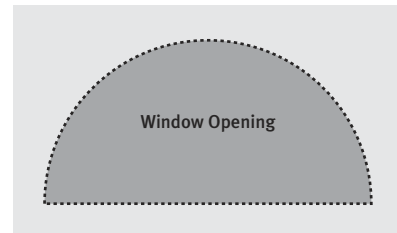

Step 4

Before you remove the paper, double check your "template" size by measuring the width and height of the template drawing and comparing these to the measurements taken in Step 1. These should match exactly. If they don't, verify that you've drawn the shape of the window opening correctly.

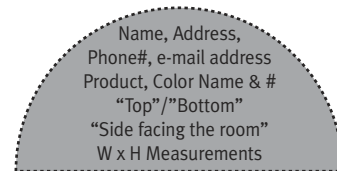

Step 5

Remove your template from the wall and fold the stickers to the back of the template. Lay the template on a flat surface and cut out the shape. Be careful to cut the shape exactly. Once your template is cut out place it back into the window opening to verify that it fits properly.

Step 6

On the template, write "top", "bottom" and "side facing into the room" in the appropriate locations. Write your name, address, telephone number, email address, product and color name and numbers as shown.

Step 7

Roll up the template and place it into the mailing tube along with your completed order form. Seal the mailing tube securely. Send your template and order to Smith+Noble 1181 California Ave., Corona CA 92881

You can also order a template kit, consisting of:

- Brown craft paper
- Black marker
- 48" mailing tube
- Non abrasive stickers
